

Solutions of Assignment9

The screenshot shows a web browser at localhost:4200 displaying the text "This is Assignment9_1" and "suolleveraM". The VS Code editor in the background shows the file explorer with a project structure including "ASSIGNMENT9_1" and "myrev.pipe.ts". The code in "myrev.pipe.ts" defines a class "MyrevPipe" that implements "PipeTransform". It has a "transform" method that takes a string and returns a string, and a "while" loop that processes the string.

```
src > app > TS myrev.pipe.ts > MyrevPipe > transform
6  })
7  export class MyrevPipe implements PipeTransform {
8
9      transform(value: string): string {
10         var temp : string;
11         var start : number = 0;
12         var end : number = value.length-1;
13         var arr : string[] = new Array(value.length);
14
15         while(start < end)
16         {
17             temp = value[start];
18             arr[start] = value[end];
19             arr[end] = temp;
20
21             start++;
22             end--;
23         }
24
25         var Str : string = "";
26         for(var iCnt=0; iCnt <= arr.length; iCnt++)
27         {
28             if(arr[iCnt] == undefined)
29             {
30                 break;
31             }
32             Str = Str + arr[iCnt];
33         }
34         return Str;
35     }
```

The screenshot shows a web browser at localhost:4200 displaying the text "This is Assignment9_2", "Addition : 11", and "Multiplication : 21". The VS Code editor in the background shows the file explorer with a project structure including "ASSIGNMENT9_2" and "myadd.pipe.ts". The code in "myadd.pipe.ts" defines a class "MymultPipe" that implements "PipeTransform". It has a "transform" method that takes a number and returns a number, and a "while" loop that processes the number.

```
src > app > TS mymult.pipe.ts > MymultPipe > transform
1  import { Pipe, PipeTransform } from '@angular/core';
2
3  @Pipe({
4      name: 'mymult',
5      standalone: true
6  })
7  export class MymultPipe implements PipeTransform {
8
9      transform(value: number, ...args: number[]): number {
10         var temp : number = 0;
11         temp = value * args[0];
12         return temp;
13     }
```
